I'm excited to be applying for the Software Engineer, Frontend position at Hotjar. Hotjar has an amazing culture and a vision I truly believe in, to give teams of all sizes the insights they need to create experiences they love. This is something I would love to become part of. What is most fascinating is the Hotjar meetups that gives employees and opportunity to meet, have fun, share ideas etc.

I have worked at Andela for almost three years now. I am a Frontend Software Engineer, mainly focused in Javascript, HTML, CSS and related libraries like React. In this role I worked on various projects including building the Information System at Andela and building and maintaining music distribution platform.

As a frontend engineer at Andela Information System (AIS), we were able to deliver a number of features. I remember one feature that I was responsible for that enabled our users (Andela employees) to search through available skills and add them to their profiles. This feature was received really well. I later joined to work for one of Andela's Clients (Stem Disintermedia), where we built and maintained a music distribution platform, this platform enables users to upload music, then the system will distribute their music to various music platforms such as spotify, deezer etc. I worked on this project fully remote for one and half years. In both teams we practiced Agile methodology and pair programming sessions, of which I found very beneficial.

Again, Hotjar vision and culture has made a huge impression on me. I will be thrilled to work at and organization where every employee has an opportunity to advance and sharpen their skills through mentorship and pair programming.

Thank you for your time,

Sincerely,
Josiah Mokobo Nyarega
